

Finally, a UV conformal coating for the real world.

The new Novagard UV® 800-260 is the only UV-curable silicone conformal coating to receive UL 746E approval for indoor and outdoor applications. That means your printed circuit boards or control boards can be ready to operate in the world's harshest environments, including temperatures of -70°C to 200°C or high humidity.

Because Novagard UV coatings are UV cured, there's no oven baking, no nitrogen blankets, no VOC's. Processing is extremely fast—parts remain at room temperature and can go straight to packages without racking.
