

# The flexible seal that lasts as long as the roof.

Your reputation depends in large part in the materials you use. Build a reputation for dependable performance with Novaflex<sup>®</sup> metal roof sealant. Novaflex gives you superior flexibility and adhesion to most construction materials, including metal, coated metal, wood, masonry, PVC, and Kynar<sup>®</sup>. It's easy to apply, *especially in cold weather*, and easy to clean.

Novaflex extrudes down to 0°F and up to 120°F, and sticks even in damp conditions. It becomes tack-free in 10 minutes and completely cured in up to two days, leaving a seal that stays flexible for decades with minimal shrinkage.

Kynar is a registered trademark of Arkema Inc.
